# BLAST CONTAINER

## Blast containment system for suspect packages / items

BLAST PROTECTION  
BLAST CONTAINMENT  
EVENT VENUES  
OFFICES / TERMINALS

The blast container is a cylindrical assembly consisting of composite woven fibres designed to withstand blast and fragments from an explosive device containing up to 500g (16 oz) of PE4.

The blast container is designed to compliment scanning and x-ray equipment. The container enables the user to contain a suspect explosive device while

awaiting the arrival of a bomb disposal team. The removable inner bag is designed to hold the device in an upright position.

While the datum points on the outside of the bin assist the First Responder/Bomb Disposal Team in scanning and determining the threat and the appropriate action required.

The exterior is fitted with two rubber rings to allow the container to be easily manoeuvred into position and each unit is coated in a highly visible day glow orange.

The container consists of three components: The main unit, detachable base plate (optional) and removable retaining bag with handles.

### SPECIFICATIONS

- Max charge capacity: 500g
- Height: 900mm
- Outer diameter: 535mm
- Inner diameter: 517mm
- Wall thickness: 18mm
- Weight: 47kg
